Lists and Keys

1. **How do you render a list of items in React? Why is it important to use keys when rendering lists?**
   - ➤ To render a list in React, use map(). Keys help React track list items efficiently and improve performance.

2. **What are keys in React, and what happens if you do not provide a unique key?**
   - ➤ Keys are unique IDs for list items. Without them, React may render lists incorrectly and performance can suffer.
